

*Axial-Flow Compressors: A Strategy for Aerodynamic Design and Analysis*

Table Of Contents

Preface

**1.0 Introduction**

- 1.1 Axial-Flow Compressor Basics**
- 1.2 Basic Velocity Diagrams for a Stage**
- 1.3 Similitude and Performance Characteristics**
- 1.4 Stage Matching and Stability**
- 1.5 Dimensionless Parameters**
- 1.6 Units and Conventions**

**2.0 Thermodynamics**

- 2.1 First and Second Laws of Thermodynamics**
- 2.2 Efficiency**
- 2.3 Fluid Equation-of-State Fundamentals**
- 2.4 The Caloric Equation of State**
- 2.5 Entropy and the Speed of Sound**
- 2.6 The Thermal Equation of State for Real Gases**
- 2.7 Thermodynamic Properties of Real Gases**
- 2.8 Thermally and Calorically Perfect Gases**
- 2.9 The Pseudo-Perfect Gas Model**
- 2.10 Component Performance Parameters**
- 2.11 Gas Viscosity**
- 2.12 A Computerized Equation of State Package**

**3.0 Fluid Mechanics**

- 3.1 Flow in a Rotating Coordinate System**
- 3.2 Adiabatic Inviscid Compressible Flow**
- 3.3 Adiabatic Inviscid Compressible Flow Applications**
- 3.4 Boundary Layer Analysis**
- 3.5 Two-Dimensional Boundary Layer Analysis**
- 3.6 Axisymmetric Three-Dimensional Boundary Layer Analysis**
- 3.7 Vector Operators in Natural Coordinates**

**4.0 Axial-Flow Compressor Blade Profiles**

- 4.1 Cascade Nomenclature**
- 4.2 NACA 65-Series Profile**
- 4.3 Circular-Arc Camberline**
- 4.4 Parabolic-Arc Camberline**
- 4.5 British C.4 Profile**
- 4.6 Double-Circular-Arc Profile**
- 4.7 NACA A<sub>4</sub>K<sub>6</sub> 63-Series Guide Vane Profile**
- 4.8 Controlled Diffusion Airfoils**
- 4.9 Blade Throat Openings**
- 4.10 Staggered Blade Geometry**

**5.0 Two-Dimensional Blade-to-Blade Flow Through Cascades of Blades**

- 5.1 The Blade-to-Blade Flow Problem**
- 5.2 Coordinate System and Velocity Components**
- 5.3 Potential Flow in the Blade-to-Blade Plane**
- 5.4 Linearized Potential Flow Analysis**
- 5.5 The Time-Marching Method**
- 5.6 Blade Surface Boundary Layer Analysis**
- 5.7 Summary**

- 6.0 Empirical Performance Models Based On Two-Dimensional Cascade Tests**
  - 6.1 Cascade Geometry and Performance Parameters**
  - 6.2 Design Angle of Attack or Incidence Angle**
  - 6.3 Design Deviation Angle**
  - 6.4 Design Loss Coefficient and Diffusion Factors**
  - 6.5 Positive and Negative Stall Incidence Angles**
  - 6.6 Mach Number Effects**
  - 6.7 Shock Wave Loss for Supersonic Cascades**
  - 6.8 Off-Design Cascade Performance Correlations**
  - 6.9 Blade Tip Clearance Loss**
  - 6.10 Shroud Seal Leakage Loss**
  - 6.11 Implementation, Extensions and Alternate Methods**
  
- 7.0 Meridional Through-Flow Analysis**
  - 7.1 Meridional Coordinate System**
  - 7.2 Inviscid, Adiabatic Flow on a Quasi-Normal**
  - 7.3 Linking Quasi-Normals**
  - 7.4 Repositioning the Stream Surfaces**
  - 7.5 Full Normal Equilibrium Solution**
  - 7.6 Simplified Forms of the Through-Flow Analysis**
  - 7.7 Annulus Sizing**
  - 7.8 Numerical Approximations**
  
- 8.0 End-Wall Boundary Layer Analysis**
  - 8.1 Historical Development of End-Wall Boundary Layer Theory**
  - 8.2 The End-Wall Boundary Layer Equations**
  - 8.3 The Boundary Layer Velocity Profile Assumptions**
  - 8.4 Empirical Models for Entrainment and Wall Shear Stress**
  - 8.5 The Blade Force Defect Thicknesses**
  - 8.6 Seal Leakage Effects for Shrouded Blades**
  - 8.7 Boundary layer Jump Conditions**
  - 8.8 Solution Procedure**
  - 8.9 Typical Results**
  
- 9.0 Aerodynamic Performance Analysis**
  - 9.1 Geometry Considerations**
  - 9.2 Cascade Performance Considerations**
  - 9.3 Stall and Compressor Surge Considerations**
  - 9.4 Approximate Normal Equilibrium Results**
  - 9.5 Full Normal Equilibrium Results**
  - 9.6 Concluding Remarks**
  
- 10.0 Compressor Stage Aerodynamic Design**
  - 10.1 Dimensionless Performance Parameters**
  - 10.2 Application to Stage Design**
  - 10.3 Blade Design**
  - 10.4 Selecting the Stage Performance Parameters**
  - 10.5 Selecting the Swirl Vortex Type**
  - 10.6 Free Vortex Flow**
  - 10.7 Constant Reaction Vortex Flow**
  - 10.8 Constant Swirl and Exponential Vortex Flow**
  - 10.9 Assigned Flow Angle Vortex Flows**
  - 10.10 Application to a Practical Stage Design**
  - 10.11 A Repeating Stage Axial-Flow Compressor**
  - 10.12 A Computerized Stage Design System**

- 11.0 Multistage Axial-Flow Compressor Aerodynamic Design**
  - 11.1 The Basic Compressor Design Approach**
  - 11.2 Aerodynamic Performance Specifications**
  - 11.3 Blade Design**
  - 11.4 Refining the Compressor Design**
  - 11.5 An Axial-Flow Compressor Design Example**
  - 11.6 The Distribution of Stage Performance Parameters**
  - 11.7 The Swirl Vortex Type**
  - 11.8 Risks and Benefits**
  
- 12.0 Quasi-Three-Dimensional Blade Passage Flow Field Analysis**
  - 12.1 Quasi-Three-Dimensional Flow**
  - 12.2 Hub-to-Shroud Flow Governing Equations**
  - 12.3 Numerical Integration of the Governing Equations**
  - 12.4 Repositioning Stream Surfaces**
  - 12.5 The Hub-to-Shroud Flow Analysis**
  - 12.6 Coupling the Two Basic Flow Analyses**
  - 12.7 Boundary Layer Analysis**
  
- 13.0 Other Components and Variations**
  - 13.1 Adjustable Blade Rows**
  - 13.2 The Exhaust Diffuser**
  - 13.3 The Scroll or Collector**
  - 13.4 Reynolds Number and Surface Roughness Effects**
  - 13.5 The Axial-Centrifugal Compressor**

**Answers to the Exercises**
